EXPERIENCE

XPOINT (B2B geolocation compliance & fraud detection platform for regulated gaming operators)

Austin, TX

Senior Product Manager

Apr 2025 – Present

- Defined product vision, strategy & roadmap for geolocation SDK (iOS, Android, Web) and location intelligence platform across 20+ regulated jurisdictions, driving feature delivery for Tier-1 clients (BetMGM, Fanatics, Bet365, Entain) and reducing geolocation failure rates by 35% through targeted SDK optimizations
- Launched 0→1 location intelligence surfaces (real-time Live Map, geolocation Check Requests, User Risk Profiles) by leading cross-functional teams across engineering, design, data & customer success, synthesizing proprietary geospatial signals into scalable user-facing products serving 100M+ monthly location checks at 99.7% accuracy
- Orchestrated BetFanatics strategic engagement end-to-end: shaped product narrative for executive decks, defined measurable objectives across 5 technical workstreams, and aligned cross-team sprints to convert a competitive displacement threat into a client retention win, securing \$5M+ in annual contract value
- Spearheaded fraud detection product strategy (IP-based location jumping detection, device fingerprinting, Config Management System), designing the abstraction layer that translated ambiguous geospatial signals into structured operator-facing risk surfaces and improving fraud visibility by 3x while reducing false positive rates by 40%
- Architected LLM-powered competitive intelligence agent with custom prompt architecture and structured JSON output schemas, enabling autonomous multi-step monitoring of competitor positioning and feature launches across weekly cycles, reducing manual research time by 80% and informing 3 SDK roadmap reprioritization decisions against GeoComply, Radar & OpenBet
- Redesigned operator portal UX and SDK developer experience targeting Stripe-level integration quality, compressing average client onboarding from 6 weeks to 1 day, establishing product visibility cadence that aligned engineering priorities with go-to-market roadmap

LIGHT & WONDER (Jackpot Party - 7th largest US mobile game by revenue)

Austin, TX

Technical Product Manager

Aug 2024 – Apr 2025

- Prioritized 12 features across 3 teams (client, backend, tools) using player behavioral data and engagement analytics to optimize consumer experience, driving 20% day-over-day player retention improvement contributing to \$450M ARR
- Launched consumer game features partnering with engineering, analytics & design, delivering 15% player engagement lift and 10% MAU growth; built CMS experimentation tooling supporting 1M+ daily active users at 99.9% uptime
- Designed AI-driven player segmentation framework leveraging ML behavioral models to personalize in-game content delivery at scale, owning the abstraction layer between raw engagement signals and targeted offer logic and increasing conversion rates by 18% across 3 player cohorts
- Shipped agentic AI workflows into core product operations (competitive analysis, sprint documentation, feature spec generation) from 0→1, reducing PM cycle time by 40% and enabling faster iteration on player experience features; evaluated and integrated AI prototyping tools including Claude and v0 to accelerate definition-to-delivery cycles by 3-4x

GAMES24X7 (Unicorn gaming startup, 100M+ users, real money gaming & fantasy sports)

Mumbai, India

Technical Product Manager

Mar 2020 – July 2022

- Defined product roadmap for fantasy-sports mobile product using data analytics and user research to prioritize features, boosting new customer ARR by 33% YoY and increasing gross profit by 25%
- Launched AI/ML matchmaking features leveraging user behavior data to personalize the consumer experience, increasing new user signups by 70% and generating \$5M+ in incremental revenue
- Secured C-Suite buy-in for cross-platform fraud detection system (Web, Android, iOS), reducing fraud rates by 45% across 10 geographies and saving \$600K+ annually—translating complex data signals into actionable product interventions
- Analyzed user data (SQL, Python, Tableau) and applied ML-driven behavioral analytics to improve community health for 50M+ users, driving a 70% increase in Net Promoter Score (NPS)

Senior Software Engineer

Mar 2019 – Mar 2020

- Delivered 6 consumer-facing features through cross-functional collaboration with product & design teams, serving 7M+ users, raising annual revenues by \$15M and increasing weekly user retention by 40%
- Built A/B testing experimentation platform for customer segmentation, improving marketing campaign efficiency by 72% and reducing customer acquisition cost (CAC) by 35%

GURU.COM (Freelancing marketplace, 4M+ users)

Noida, India

Software Engineer (Payments Product Manager)

Jan 2018 – Mar 2019

- Redesigned job posting user journey using research-driven insights, driving 5x increase in jobs posted and 25% revenue lift; architected payment safeguard system reducing complaint rates by 80% and generating \$75K+ in dispute-free revenue

EDUCATION

UNIVERSITY OF MICHIGAN, STEPHEN M. ROSS SCHOOL OF BUSINESS

Ann Arbor, US

Master of Business Administration (STEM designated)

Aug 2022 – May 2024

Concentrations: Technology, Strategy, Design Thinking & Gen AI | GMAT: 760 (99th percentile)

SHIV NADAR UNIVERSITY

Noida, India

B.Tech, Computer Science & Engineering (Merit full-tuition scholarship, top 1%-ile)

Aug 2014 – May 2018

ADDITIONAL

Skills: Product Strategy & Roadmapping, UI/UX (Figma), Data Analytics (SQL, Tableau, PowerBI), A/B Testing, Agile, Jira, Python, AI/ML, GCP, AWS, REST APIs, LLM product development, prompt engineering, agentic workflows, AI prototyping (Claude, v0)

Interests: Travel, global soccer (FIFA 2018 attendee, Arsenal supporter), community building, non profit co-founder
